

# Phase 2a – Live Energy Prices & Algeria Project Map

---

RamBelEnergy.com

June 2026

Project Value: \$800

---

## What We're Building

---

Two new features for RamBelEnergy.com:

### 1. Live Energy Prices

Real-time energy commodity prices displayed on the website — with Saharan Blend as the primary benchmark for Algeria.

### 2. Algeria Energy Projects Database

An interactive map and project database tracking all energy infrastructure projects across Algeria — pipelines, solar plants, LNG terminals, and more.

---

## Feature 1 – Live Energy Prices

---

### What You'll See

**Homepage Ticker** — A scrolling banner at the top of the homepage showing live energy prices:

- Saharan Blend (Algerian crude) ★
- Brent (global benchmark)
- WTI (US benchmark)
- OPEC Basket (reference)

Each price shows the current value, whether it went up or down, and which source provided it.

**Energy Prices Page** ( </energy-prices> ) — A full dashboard with all 7 benchmarks displayed as cards. Click any price to dive deeper.

**Intelligence Pages** ( </intelligence/saharan-blend> , </intelligence/brent> , etc.) — Clicking a price opens a detailed page with:

- Current price with full details
- Historical trend chart (7 days / 30 days / 90 days / 1 year)
- Country context (production data, export destinations, key infrastructure)
- Related benchmarks for comparison
- Source references and official reports

## Key Points

- Prices auto-refresh every 5 minutes
- Every price shows: source, last update time, confidence level
- If a source is temporarily unavailable, it shows "Temporarily unavailable" (never exposes technical details to users)
- All prices saved to database for future analytics

## Sources We Use

| PRIORITY     | SOURCE                        | WHAT IT PROVIDES                       |
|--------------|-------------------------------|----------------------------------------|
| Primary      | Platts / Argus (subscription) | Saharan Blend, Brent, WTI, Murban, TTF |
| Validation   | OPEC (free)                   | OPEC Basket reference price            |
| Fallback     | OilPrice.com (free)           | Backup when primary is down            |
| Supplemental | EIA (free)                    | Henry Hub (US natural gas)             |

## Feature 2 – Algeria Energy Projects Database

### What You'll See

**Projects Page** ( </energy-projects> ) — A filterable database of Algerian energy projects:

- **Filter by category:** Oil & Gas, Renewable, LNG, Power, Hydrogen
- **Filter by status:** Operational, Under Construction, Planned, Proposed
- **Filter by location** (wilaya/province)

- **Search** by project name

Each project card shows:

- Project name and route/location
- Status badge (● Operational, ● Under Construction, ● Planned)
- Capacity (e.g., "10 bcm/year", "15 GW")
- Operating company and partners
- Source attribution with last-updated date

**Interactive Map** — A full map of Algeria with project locations marked by colored pins. Click any pin to see a popup with project name, status, and capacity. Click through to full project details.

**Project Detail** — Tap any project card to expand and see all information:

- Description, location, GPS coordinates
- Capacity, investment value
- Operator and partners
- Start date, expected completion
- All original sources linked
- Update history timeline

## Where Data Comes From

The system automatically collects project information from **19 official sources**:

| CATEGORY                    | SOURCES                                                                |
|-----------------------------|------------------------------------------------------------------------|
| Algerian Official           | Ministry of Energy, Sonatrach, Sonelgaz, ALNAFT, AAPI, JORADP          |
| International Organizations | World Bank, IEA, OPEC, Global Energy Monitor, African Development Bank |
| News                        | Reuters Energy                                                         |
| Operating Companies         | Eni, TotalEnergies, BP, Equinor, ExxonMobil, Chevron, Occidental       |

## How It Works

1. **Automatic Collection** — The system checks all 19 sources every 6-12 hours for new information
2. **AI Extraction** — Artificial intelligence reads the pages and extracts structured project data

3. **Review by Admin** — New or changed projects appear in a review queue. Admin approves, edits, or rejects before anything goes live
4. **Published** — Approved projects appear on the website with full source attribution

## What This Means

- The project database **updates itself** — no manual data entry
- Every project links back to its **original source** — fully verifiable
- Admin has **final approval** on everything — accuracy is controlled
- Projects not updated by any source for 30+ days are **flagged for review**

## Timeline

| WEEK          | WHAT HAPPENS                                                                         |
|---------------|--------------------------------------------------------------------------------------|
| <b>Week 1</b> | Set up database + build price data pipeline                                          |
| <b>Week 2</b> | Build price display (ticker, dashboard, intelligence pages) + start project crawlers |
| <b>Week 3</b> | Build AI extraction pipeline + admin review system                                   |
| <b>Week 4</b> | Build project pages + interactive map                                                |
| <b>Week 5</b> | Integration, testing, mobile optimization, deployment                                |

**Total: ~5 weeks (25 working days)**

## What You Get

| DELIVERABLE                     | DESCRIPTION                                         |
|---------------------------------|-----------------------------------------------------|
| Homepage price ticker           | Scrolling live prices — always visible              |
| /energy-prices page             | Full dashboard with 7 benchmarks                    |
| /intelligence/[benchmark] pages | Detailed view per benchmark with charts and context |
| /energy-projects page           | Filterable project database                         |
| Interactive Algeria map         | Leaflet map with project markers and popups         |
| Admin review system             | Approve/edit/reject incoming project data           |
| Automated data pipeline         | 19 sources checked every 6-12 hours                 |
| Mobile responsive               | All pages work on phones and tablets                |
| Multilingual ready              | French / English / Arabic support                   |

## Payment Terms

| STAGE        | PERCENTAGE | AMOUNT | WHEN                                     |
|--------------|------------|--------|------------------------------------------|
| Down Payment | 50%        | \$400  | At project start                         |
| Completion   | 30%        | \$240  | When all features are built and deployed |
| Final        | 20%        | \$160  | After bug fixes and user review          |

**Total Project Value: \$800**
